The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be

Claim 27; Page; 190pp; English.

```
used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypebides may be used to diagnose a particular condition, disease or disorder associated

Claim 27; Page; 190pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which is a constituent protein of membrane tight junctions. Antibodies raised against the protein of membrane tight junctions. Antibodies raised against the protein are used to assay for occludin in samples, and immunofluorescent cell-staining). The membranes (e.g. by used for screening of substances which potentially influence occludin expression. Therapeutic polymucleotides derived from the DNA encoding the present sequence are used for treatment of disorders involving the brain barrier. Primers that hybridise to the occludin DNA sequence can be used to detect occludin DNA by PCR
with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents human occludin, a novel adhesion molecule which is a constituent protein of membrane tight junctions. Its amino acid sequence was deduced from overlapping cDNA clones (see AAT93752) obtained from a human liver cDNA library. Occludin can be used to reduce tissue permeability. Occludin inhibitors can be used to enhance delivery of drugs (or gene therapy vectors) by increasing absorption across endothelial or epithelial barriers, i.e. transmucosal or transvacular drug delivery. Inhibitors include occludin surface loop peptides that inhibit adhesion and/or barrier properties, or antibodies that intercat with occludin occludin receptors. Methods are claimed for identifying occludin inhibitors and for screening for the presence or absence of occludin inhibition in a sample
                                                                                                                                                                                                                                                                                                    Occludin; inhibitor; human; drug absorption; drug delivery; gene therapy; tissue permeability; cell adhesion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated human occludin protein - useful for increasing drug delivery across endothelial or epithelial barriers, or for reducing tissue permeability.

This invention relates to a pharmaceutical composition used for gene therapy, comprising a nucleic acid encoding a therapeutic gene and a promoter, a transfection vehicle and an agent to disrupt the function of the junctional complex in the cells. The pharmaceutical composition has cytostatic, cardiant, vasotropic, antiinflammatory and antilipaemic activity. The pharmaceutical composition is useful for gene therapy and for enhancing efficiency of gene delivery to cells. The composition is useful for gene therapy of cystic fibrosis, inflammatory or fibrotic lung diseases, peripheral vascular disease, coronary arterial diseases, restenosis, hypercholesterolaemia and cancer. The present sequence represents the human occludin protein. Occludin is used in the invention to determine the effect of the junctional inhibitors used in the

The invention discloses a composition comprising two or more isolated rate or human polymucleotides or a polymucleotide which represents a fragment, derivative or allalic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polymucleotide a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that is differentially expression of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence the expression of a polymucleotide sequence which is differentially expression of a polymucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition compound useful in treating pain and a pharmaceutical composition compound useful in treating pain and a pharmaceutical composition compound useful in treating pain and a pharmaceutical composition compound useful in animal (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene presented is a human protein (described in Table 3 of the sequence data for this patent did not form part of the printed of the sequence data for this patent did not form part of the printed security and obtained in electronic form directly from WIPO at the sequence data for this patent did not form part of the printed security and patent did not form directly from WIPO at the sequence data for this patent did not form part of the printed security and patent did not form datal or the sequence data for this patent did not form datal or the sequence data for this patent did not form datal or the sequence data for this patent did not form datal or the datal datal datal datal datal datal da
                                                                                                                                                                                                                                                                                                                                                                                                           New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       mucosal delivery; permeabilising peptide;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention comprises a method for assessing whether a patient is afflicted with breast cancer or ovarian cancer. The method involves the use of specific DNA markers. The method of the invention is useful in the detection and treatment of ovarian and breast cancer. Amino acid sequences ABJ37025 - ABJ37080 represent human breast/ovarian cancer-

The invention relates to recombinant nucleic acid sequences that encode both an angiogenic factor antagonist and a vascular endothelial structure regulator, collectively referred to as a KV protein. KV DNA and proteins, and also cells and compositions containing the sequences, are useful in treating or preventing cancer or angiogenesis in mammals, in particular humans. KV proteins are also useful for regulation of the development of blood vessels and their formation, in the vascular endothelium and/or tumour. The KVB702 gene and its fragments are useful in transfection of human epithelial cells and to generate products suitable for angiogenesis intervention. This sequence represents the human J36 protein used in
                                                                                                                                                                                                                                                            Novel nucleic acid for inhibition of angiogenesis and prophylaxis or treatment of cancer, comprises both an angiogenic factor antagonist and a vascular endothelial structure regulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cyclic peptide cell adhesion modulating agents, useful for modulating synaptic stability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Cell adhesion modulation; CAM; synaptic stability; cadherin; cadherin-mediated adhesion; drug delivery; cell adhesion; tumour; wound healing; neurite outgrowth.

                                                                                                                                                                                                                                                                                                                                                                                                     Composition comprising biologically active agent and permeabilizing peptide that reversibly enhances mucosal epithelial paracellular transport by modulating epithelial junctional structure and/or physiology in mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel composition comprising a biologically active agent and mucosal delivery-enhancing effective amount of permeabilising peptide that reversibly enhances mucosal epithelial paracellular transport by modulating epithelial junctional structure and/or physiology in a mammal. The agent of the invention inhibits homotypic binding of epithelial membrane adhesive protein chosen junctional adhesion molecule (JAM), occludin and claudin. The biologically active agent is effective for treatment of sexual dysfunction, for example male exectile sexual dysfunction or female sexual dysfunction. The present sequence is that of the human occludin protein which is related to the invention.
occludin; claudin; sexual dysfunction; male erectile sexual dysfunction;

agent that inhibits cadherin-mediated adhesion, where the agent comprises a cyclic peptide having a peptide ring, and where the sequence His-Alaval is present within the peptide ring, and where the sequence His-Aladebseion modulating agents that inhibit cadherin-mediated adhesion. They can be used in a method for inhibiting synaptic stability in mammals. They agents can be used in a method for inhibiting synaptic stability in mammals. They agents can be used to treat diseases or other conditions characterized by undesirable cell adhesion or to facilitate drug delivery to a specific tissue or tumour. Alternatively the agents may be used to enhance cell adhesion (e.g. to supplement or replace stitches or to facilitate wound healing) or to enhance or direct neurite outgrowth
                                                                                  The invention provides cyclic peptide cell adhesion modulating (CAM) agents that comprises a His-Ala-Val recognition sequence. Also provided is a method for inhibiting synaptic stability in a mammal that comprises administering to a mammal a therapeutically effective amount of a CAM

Use of modulating agent comprising an occludin sequence to identify compound that modulates occludin-mediated cell adhesion, involves contacting test compound with antibody and detecting antibody binding Level

Disclosure; Fig 2; 48pp; English.

The present sequence is that of the second extracellular domain of human occiudin. This domain of occludin includes a cell adhesion recognition (CAR) motif that promotes the formation of permeability barriers. The CAR motif is also found in other mammalian occludins (see AAY96006-8). Linear

need in the case of modulating occludin-mediated processes, such as call adhesion. The invention provides methods for using modulating agents capable of modulating occludin-mediated processes, such as call adhesion. The invention provides methods for using modulating agents to enhance or inhibit occludin-mediated cell adhesion in vivo or in vitro. The modulating agents comprise at least 1 occludin CAR sequence or an antibody that specifically binds the occludin CAR sequence. The modulating agents that inhibit cell adhesion may be used to treat conditions characterized by undesirable cell adhesion or to facilitate conditions characterizated by undesirable cell adhesion or to facilitate chance cell adhesion may be used to enhance would healing or reduce scarring. Antibodies raised against peptides containing the occludin CAR sequence are used in a claimed method for identifying a compound capable of modulating occludin mediated cell adhesion, especially when the test compound is produced by an expression library
                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                capable of binding to the cadherin cell adhesion recognition (CAR) sequence HAV, where the agent doesn't comprise an antibody or antigenbinding fragment of it. (1) is used for inhibiting or enhancing cadherin mediated functions like cell adhesion, neurite outgrowth, Schwann cell migration and synaptic stability in cells preferably epithelial, endothelial, neural, tumour cells and lymphocytes expressing cadherin E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulating agents for treating autoimmune diseases, cancer, spinal cord injuries, and for increasing vasopermeability, inhibiting synaptic stability and preventing pregnancy.

ö
or N. Inhibition of cadherin mediated cell adhesion by (1) is used in reducing unwanted cellular adhesion, enhancing drug delivery through skin, drug delivery to a tumour, treating cancer and/or inhibiting metastasis, inducing apoptosis, inhibiting anglogenesis, modulating immune system, preventing pregnancy, increasing vasopermeability, inhibiting synaptic stability in a mammal. Enhancement is used for facilitating wound healing, enhancing adhesion of foreign tissue implant, enhancing and/or directing neurite outgrowth and treating spinal cord injuries. (I) is used for treating demyelinating neurological diseases and for facilitating blood sampling in a mammal. (I) is used for detecting cadherin expressing cells in a sample by detecting the level of antibody cadherin complex. AAY78148 to AAY78242 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.

conclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, chancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting can engiogenesis in a mammal, inhibiting can expressing cell, preventing or treating obesity in a mammal, stimulating blood vessel regression in a mammal, enhancing drug delivery to the cantral nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing adhesion of conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age creducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, acceptance can also be used for treating e.g. psoriasis, and diabetes. The products can also be used for detection and diagnosis and in bioreactors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to cell adhesion modulating agents that comprise imidazole compounds of specified formulae that are peptidomimetics of cyclic peptides. The peptidomimetics have a structure similar to that of a cyclic peptide that comprises a cadherin cell recognition sequence HAV. The agents are used for modulating classical cadherin mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cell adhesion; imidazole; peptidomimetic; cadherin; angiogenesis; CAR; cytostatic; vulnerary; immunomodulator; vasotropic; neuroprotective; cerebroprotective; muscular; occludin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cell adhesion modulating agent used for enhancing delivery of drug to tumor comprises imidazole compounds.

Cell adhesion modulating agent, useful for modulating cadherin-mediated functions, e.g. cell adhesion, neurite outgrowth, Schwann cell migration and synaptic stability, consists of a cyclic peptide. Disclosure; Col 37; 63pp; English. 

The present invention relates to cell adhesion modulating agents and methods for enhancing or inhibiting cadherin-mediated functions. The cell adhesion modulating agents comprise at least a His-Ala-Val binding motif (HAV-BM), an analogue or peptidomimetic of, or an antibody or fragment that specifically binds to such a motif. The modulating agents may also comprise one or more cell adhesion recognition sequences (CAR) recognised by cadherin and/or other adhesion molecules. Preferably the modulating agents are cyclic peptides. The modulating agents of the invention are useful for enhancing or inhibiting cadherin-mediated functions (e.g. cell

stability), mentre outgraven, some mental magnature and synapure stability), mentre outgraven, some mental through the skin of a mammal or to a tumour or central nervous system (CNS) of a mammal, treating cancer and/or inhibiting metastases in a mammal, inducing apoptosis in a cadherin-expressing cell, inhibiting angiogenesis in a mammal, facilitating wound healing in a mammal, enhancing adhesion of foreign tissue implanted within a mammal, enhancing and/or directing neurite outgrowth, treating spinal cord injuries, treating demyellnating neurological diseases (e.g. multiple sclerosis), modulating the immune system, preventing pregnancy, increasing vasopermeability, controlling diseases associated with excess generation of otherwise normal T cells, treating diabetes, rheumatoid arthritis, and skin disorders (e.g. cutaneous lymphomas). The present sequence represents a mammalian adhesion, neurite outgrowth, Schwann cell migration and synaptic occludin CAR sequence \$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$\$

Proc. (Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: May play a role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier.

-!- SUBUNIT: Interacts with TJP1/ZO1 and with VAPA.

-!- SUBCELLUAR LOCATION: Integral membrane protein.

-!- TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells. Highly expressed in kidney. Not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                   detected in testis.

-!- DOMAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Sufficient for the tight junction localization. Involved in the regulation of the permeability barriar function of the tight junction (By similarity).
-!- PTM: Phosphorylated (By similarity).
-!- SIMILARITY: Belongs to the ELL / occludin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  196 GVNPTAQSSGSLYGSQIYALCNQFYTPAATGLYVDQYLYHYCVVDPQBAIA 246

With development, became gradually concentrated at the most basal regions of Sertoli
                                                                                                                                                                                                                                                                                                                                                                                                                                      FUNCTION: May play a role in the formation and regulation of the tight junction (TJ) paracellular permeability barrier.

19th junction (TJ) paracellular permeability barrier.

1 SUBCELIULAR LOCATION: Integral membrane protein.

1 TISSUE SPECIFICITY: Localized at tight junctions of both epithelial and endothelial cells. Highly expressed in the testis, kidney, lung, liver and brain. Not detected in skeletal muscle, property.
Grimmond S., Gustincich S., Hirokawa N., Jackson I.J., Jarvis B.D.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DOWAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity). FTM: Phosphorylated (By similarity). SIMILARITY: Belongs to the ELL / occludin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Colled coil; Phosphorylation; Tight junction; Transmembrane.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
epithelial and endothelial cells.

DOMAIN: The C-terminal is cytoplasmic and is important for interaction with ZO-1. Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity).

PTM: Phosphorylated. Less-phosphorylated forms are found in basolateral membrane, cytosol and tight junction. More-heavily phosphorylated forms are concentrated exclusively in tight
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Muresan Z., Paul D.L., Goodenough D.A.,

Necessary for the tight junction localization. Involved in the regulation of the permeability barrier function of the tight junction (By similarity). PTM: Phosphorylated.

-!- FUNCTION: May play a role in the formation and regulation of the
right junction (TJ) paracellular permeability barrier.

-!- FUNCTION: May play a role in the formation and regulation of the
right junction (TJ) paracellular permeability barrier.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- TISSUB SPECIFICITY: Localized at tight junctions of both
epithelial and endothelial cells.

-!- DOMAIN: The C-terminal is cytoplasmic and is important for
interaction with ZO-1. Necessary for the tight junction
localization. Involved in the regulation of the permeability
barrier function of the tight junction (By similarity).

-!- PTM: Phosphorylated (By similarity).

Sequence 2, Application US/09142732

Patent No. 6252045

GENERAL INFORMATION:

APPLICANT: James M. Anderson

APPLICANT: Christina M. Van Itallie

TITLE OF INVENTION: Human Occludin, Its Uses and

TITLE OF INVENTION: Enhancement of Drug Absorption Using Occludin Inhibitors

TITLE OF INVENTION: Enhancement of Drug Absorption Using Occludin Inhibitors

TITLE OF INVENTION: Enhancement of Drug Absorption Using Occludin Inhibitors

TITLE OF INVENTION: Enhancement of Drug Absorption Using Occludin Inhibitors

TORRESPONDENCES:

CORRESPONDENCES:

ADDRESSEE: Section of Digestive Diseases

ADDRESSEE: Department of Internal Medicine

STREET: 333 Cedar Street, LCI 105

CITY: New Haven

STREET: Connecticut

COUNTRY: United States of America

ZIP: O6520-8057

COMPUTER READALE FORM:

MEDIUM TYPE: 3.5" 1.44 Mb diskette

Patent No. 6489460

GENERAL INFORMATION: Shoichiro

TITLE OF INVENTION: HUMAN ADHESION MOLECULE OCCLUDIN

VINDBER PROPERSE: Birch, Stewart, Kolasch & Birch, LLP

STREET: P.O. Box 747

CITY: Falls Church

STATE: VA

COMPUTER: PLOBORY

COMPUTER READABLE FORM:

MEDIUM TYPE: PLODS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/945,826

FILING DATE: US-105-107

CLASSTERICATION F18-105-107

CLASSTERICATION NUMBER: US/08/945,826
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0425-0660P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FILING DATE: 05-NOV-1997

Patent No. 6379923

GENERAL INFORMATION:

APPLICANT: DOIN, D. ROXANNE

APPLICANT: CONAWAY, JOAN W.

APPLICANT: CONAWAY, ALI

APPLICANT: CONAWAY, ROMALD C.

TITLE OF INVENTION: RNA POlymerase II Elongation Factors

TITLE OF INVENTION: RNA POlymerase II Elongation Factors

TITLE OF SEQUENCES: 34

CORRESPONDENCES: 34

CORRESPONDENCES: STERNE, KESSLER, GOLDSTEIN & FOX P.L.L.C.

STREET: 1100 NEW YORK AVENUE, SUITE 600

CITY: WASHINGTON

STATE: D.C.

with human molecules, e.g. cell proliferative disorders, autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

(INCY-) INCYTE CORP. Rb, Kwong M, Shi X, WO2004023973-A2 in gene mapping Mooney EM, D Stevens KA, Peralta CH, Homo sapiens 25-MAR-2004 Schmidt JP, Harthshorne Patury S, Lagace RE, ABM84986 

which is a constituent protein of membrane tight junctions. Antibodies raised against the protein are used to assay for occludin in samples, and for the study of occludin localisation in membranes (e.g. by immunofluorescent cell-staining). The transformants and antibodies are used for screening of substances which potentially influence occludin expression. Therapeutic polynucleotides derived from the DNA encoding the present sequence are used for treatment of disorders involving the bloodbrain barrier. Primers that hybridise to the occludin DNA sequence can be used to detect occludin DNA by PCR The present sequence represents human occludin, a novel adhesion molecule DNA encoding human, dog and mouse occludin(s) - useful for screening for substances influencing occluding expression. Ö

Sequence 522 AA;

The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated

Its amino acid sequence was deduced from overlapping cDNA clones (see AAT93752) obtained from a human liver cDNA library. Occludin can be used to reduce tissue permeability. Occludin inhibitors can be used to enhance delivery of drugs (or gene therapy vectors) by increasing absorption across endothelial or epithelial barriers, i.e. transmucosal or transvascular drug delivery. Inhibitors include occludin surface loop peptides that inhibit adhesion and/or barrier properties, or surface loop peptides that inhibit adhesion and/or barrier properties, or claimed for identifying occludin inhibitors and for screening for the presence or absence of occludin inhibition in a sample
                                                                                                                                                                                                                                                                             drug absorption; drug delivery; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ed human occludin protein - useful for increasing drug delivery endothelial or epithelial barriers, or for reducing tissue

The pharmaceutical composition of cytostatic, cardiant, vasotropic, antiinflammatory and antilipaemic cytostatic, cardiant, vasotropic, antiinflammatory and antilipaemic cytostatic, rhe pharmaceutical composition is useful for gene therapy and for enhancing efficiency of gene followery to cells. The composition is useful for gene therapy of cystic fibrosis, inflammatory or fibrotic lung diseases, peripheral vascular disease, coronary arterial diseases, restenosis, hypercholesterolaemia and cancer. The present sequence represents the human occludin protein. Occludin is used in the invention to determine the effect of the junctional inhibitors used in the

                                                                                                                                                                                                                                                                                                   The invention comprises a method for assessing whether a patient is afflicted with breast cancer or ovarian cancer. The method involves the use of specific DNA markers. The method of the invention is useful in the detection and treatment of ovarian and breast cancer. Amino acid sequences ABJ37025 - ABJ37080 represent human breast/ovarian cancer-

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allalic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the composition, a method for identifying a compound that regulates the activity of one or more of the composition, a method for identifying a compound comparing a pharmaceutical composition, a method for identifying a compound seglul in treating activity in an animal of one or more of the polypeptides given in the paper in an animal of one or more of the polypeptides given in the composition and a pharmaceutical composition contains and a pharmaceutical composition composition contains and a pharmaceutical composition contains and contains and contains and contains and contains 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (described in Table 3 of the specification) which is differentially expressed during pain.

Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         mucosal delivery; permeabilising peptide;
mucosal epithelial paracellular transport; epithelial junction;
epithelial membrane adhesive protein; junctional adhesion molecule; JAM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The present sequence represents canine occludin, a novel adhesion molecule which is a constituent protein of membrane tight junctions. The present sequence is encoded by AAT9793, which encodes an extra 16 amino acid residues in the correct reading frame, which are not shown in the specification. Antibodies raised against the protein are used to assay for occludin in samples, and for the study of occludin localisation in membranes (e.g. by immunofluorescent cell-staining). The transformants and antibodies are used for screening of substances which potentially influence occludin expression. Therapeutic polynucleotides derived from the DNA encoding the present sequence are used for treatment of disorders involving the blood-brain barrier. Primers that hybridies to the occludin DNA sequence can be used to detect occludin DNA by PCR
                                                                                                                                                                       DNA encoding human, dog and mouse occludin(s) - useful for screening for substances influencing occluding expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rat; pain; neuronal tissue; gene therapy; spinal segmental nerve injury; chronic constriction injury; CCI; spared nerve injury; SNI; Chung.

                                                                                                                                                                                                                                                                                                                                                                                                      Composition comprising biologically active agent and permeabilizing peptide that reversibly enhances mucosal epithelial paracellular transport by modulating epithelial junctional structure and/or physiology
occludin; claudin; sexual dysfunction; male erectile sexual dysfunction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel composition comprising a biologically active agent and mucosal delivery-enhancing effective amount of permeabilising peptide that reversibly enhances mucosal epithelial paracellular transport by modulating epithelial junctional structure and/or physiology in a mammal. The agent of the invention inhibits homotypic binding of epithelial membrane adhesive protein chosen junctional adhesion molecule (JAM), occludin and claudin. The biologically active agent is effective for treatment of sexual dysfunction. For example male erectile sexual dysfunction or female sexual dysfunction. The present sequence is that of the human occludin protein which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present sequence represents mouse occludin, a novel adhesion molecule which is a constituent protein of membrane tight junctions. Antibodies raised against the protein are used to assay for occludin in samples, and for the study of occludin localisation in membranes (e.g. by immunofluorescent cell-staining). The transformants and antibodies are used for screening of substances which potentially influence occludin expression. Therapeutic polynucleotides derived from the DNA encoding the present sequence are used for treatment of disorders involving the bloodused to detect occludin DNA by PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This peptide (#2) comprises amino acids 113-135 of human occludin (see AMM3463B) plus an N-terminal Cys residue to allow conjugation for antibody production. Peptide #1 (see AMM34639) comprises amino acids 90-112 plus N-terminal Cys. Together these contiguous peptides compose the putative first extracellular loop of the occludin protein. They were used to raise rabbit polyclonal anti-peptide antibodies. Both peptides are capable of inhibiting adhesion in occludin-transfected fibroblasts. Occludin inhibitors can be used to enhance delivery of drugs (or gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Occludin; inhibitor; human; drug absorption; drug delivery; gene therapy; tissue permeability; cell adhesion; antibody.
                                              DNA encoding human, dog and mouse occludin(s) - useful for screening for substances influencing occluding expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated human occludin protein - useful for increasing drug delivery across endothelial or epithelial barriers, or for reducing tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 WDRGYGTSLLGGSVGYPYGGSGFGSYGSGYGYGY-GYGYGYGYGYTDPRAAK 50

                                                                                                              The invention discisles a composition comprising two or more isolated rate or chained are a vector comprising the novel between the invention discisles a composition of the nucleic acid sequence. Also derivative or allelic variation of the nucleic acid sequence. Also comprising the vector, a method for identifying a nucleotide, a host cell comprising the vector in an entay, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain an agent that increases of accreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal composition of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of the polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity in an animal of one or more of the polypeptides or their antibodies. The polynucleotide or the compound that colypeptides or their antibodies. The polynucleotide or the compound that or more pain and appared nerve injury (CDI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (described in Table 3 of the specification) which is differentially expressed during pain. Or the sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

Peptide #2 (see AAM34640) comprises amino acids 113-1135 plus N-terminal Cys. Together these contiguous peptides compose the putative first extracellular loop of the occludin protein. They were used to raise rabbit polyclonal anti-peptide antibodies. Both peptides are capable of inhibiting adhesion in occludin-transfected fibroblasts. Occludin inhibitors can be used to enhance delivery of drugs (or gene therapy vectors) by increasing absorption across endothelial or epithelial barriers, i.e. transmucosal or transvascular drug delivery. Inhibitors include occludin surface loop peptides that inhibit adhesion and/or barrier properties, or antibodies that interact with occludin or
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Occludin; inhibitor; human; drug absorption; drug delivery; gene therapy; tissue permeability; cell adhesion; antibody.
therapy vectors) by increasing absorption across endothelial or epithelial barriers, i.e. transmucosal or transvascular drug delivery. Inhibitors include occludin sunface loop peptides that inhibit adhesion and/or barrier properties, or antibodies that interact with occludin or

Also described: (1) DNA encoding KAPs of mouse origin; (2) proteins encoded by the human and mouse DNA, and their partial peptides, and proteins encoded by the human and mouse DNA, and their partial peptides, and proteins encoded by caid residues; (3) DNA hybridising to the DNA encoding KAP; (4) peptides and residues; (3) DNA hybridising to the DNA encoding KAP; (1), where X = Q, V, R or I, and YGXGYGSGY (II), where X = Y, C I or F; (5) fusion proteins and peptides containing these proteins and peptides; (8) expression or peptide; (6) antibodies to the proteins and peptides; (8) expression vectors containing the DNA encoding KAP; are knockout animals for KAP or which overexpress KAP; (11) screening cabetances promoting or inhibiting the binding of KAP to hair keratin, or their partial peptides or cells expression of KAP; comprising using KAP or their compositions containing these compounds, or containing KAP or their partial peptides or cells expression vectors for them, or host calls transformed by these vectors. KAP sequences can be used as hair compositions (such as hair and beard growth inprovers, hair colourants and hair conditioners) and in therapeutic compositions for hair and beard growth improvers, hair colourants and hair conditioners) and in therapeutic compositions for hair conditioners.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNAs encoding 39 Keratin-associated proteins localized on human chromosome 21, useful for screening binding and expression modifiers and as cosmetic and therapeutic agents for hair disorders.

ATTORNEY, MAKI, David J.

NAME: MAKI, David J.

REGISTRATION NUMBER: 31,392

REFERENCE/DOCKET NUMBER: 10008

TELECOMMUNICATION INFORMATION:

TELEPHONE: (206) 682-6931

INPORMATION FOR ESC ID NO: 5:

SEQUENCE CHARACTERISTICS:

LENGTH: 48 amino acids

TYPE: amino acid

STRANDEDNESS: single

COLOGY: linear
